

Table 20. 2013 Race 4 Fusarium wilt race 4 screening evaluation of RBTN entries in the Kearney research center greenhouse¹ near Parlier, CA., conducted by Univ. of California and USDA/ARS (Hutmacher et al). Evaluations conducted 7 weeks post-emergence on plants following root-dip inoculation with race 4 fusarium at the 2-3 leaf stage. Averages and standard deviations (σ) are shown.

Cultivar	Number of Plants Evaluated	Foliar Disease Severity Index [†]		Vascular Root Staining [‡]		Number of Main Stem Nodes		Plant Height	
	#	0-5	σ	0-5	σ		σ	cm	σ

*Daytona RF and Phytogen 725RF - Moderately-Susceptible to Fusarium Race-4 (Acala Checks)

**Phy-802RF & Phy-811RF - Resistant to Fusarium Race-4 (Pima Checks)

¹Kearney Research Center greenhouse Fusarium wilt (FOV) race 4 evaluation planted August 21-22 and evaluated October 12-15 (approximately 7-8 weeks post emergence).

[†]Foliar disease severity index scale: 0 = no symptoms; 1 = epinasty and slight dwarfing; 2 = 1 to 30% of leaves chlorotic; 3 = 31 to 80% of leaves chlorotic and severe stunting; 4 = 81 to 100% of leaves chlorotic; and 5 = plant death.

[‡]Vascular Root Staining: 0 = no vascular root staining evident, 1 = light vascular root staining evident as spotty areas, 2 = more continuous than 1, but light colored staining covering an area between one quarter and one half of the stem cross-section, 3 = moderate brown/black staining evident in a band encircling most of the stem cross section, 4 = brown/black staining evident across most vascular tissue in stem cross section, and 5 = plant severely damaged or plant death with staining evident throughout a cross-section of root tissue (Ulloa et al. 2006, 2009a).
